## **ICS Expands Scope of Accredited Head Protection Testing Services**

**Brunswick, Ohio** – ICS Laboratories has expanded its scope of IEC/ISO 17025 accredited head protection testing and conformity assessments to now include the full range of ASTM, CPSC and NOCSAE helmet standards for sports and recreational head protection.

The accreditation was granted by the American Association for Laboratory Accreditation (A2LA) following their on-site audit of ICS's abilities and technical competencies in testing and performance assessment of sports and recreational head protection products to their respective standards. A2LA is the principle U.S. authority for testing and calibration laboratory accreditation.

"This significant expansion of the head protective equipment markets we serve beyond that of our current industrial & occupational helmet markets into recreational & sports related helmets, further validates our client service objective of being a single source for protective equipment conformity assessment – 'Any Product, Any Market – One Source'", remarked Dale Pfriem, founder and President of ICS.
