ICS Improves Head Protection Laboratory

Brunswick, Ohio – ICS Laboratories has completed the installation of a new, automated, dielectric strength test platform for industrial head protection testing. The automated test platform will further insure accurate and consistent test data while at the same time, improving testing efficiency. Dielectric strength, or electrical insulation performance, is critical to industrial safety helmets used by electrical workers or any worker with potential electrical contact exposure.

ICS is an IEC/ISO 17025 accredited testing laboratory specializing in personal protective equipment. The head protection laboratory division provides conformity assessment over a full range of ANSI, ASTM, CPSC, MIL and NOCSAE helmet performance standards for industrial, occupational, military and sports & recreational head protection.

This significant lab improvement further validates our client service objective for bringing maximum efficiency and competent test results to the market.
